# VEHICLE TOWBARS, COUPLINGS AND SAFETY PRODUCTS

Vehicle couplings are the primary connection between your towing vehicle and the towed equipment. They are mounted to the chassis of the towing vehicle and as they need to form a secure link, must be manufactured from quality materials to the highest standard. We offer a full range from accredited brands. These are fully tested, UK and EU approved.

We also stock a variety of safety products to accessorise your vehicles.

# TOWBARS

We supply a large range of towbars from all the leading UK manufacturers including Witter, TowTrust, PCT, Brink, Westfalia and A1. These towbars are made to the highest standards and are manufactured from high strength structural steel, using the very latest production techniques and processes. All towbars meet the current EU legislation and come with a lifetime guarantee.

## Things to Consider When Purchasing a Towbar...

The complete range is designed for today's modern lifestyles including every application in the towed fleet market - from straightforward 2-bolt flange towbars to swan neck and the popular detachable versions.

Please contact the team at AlphaParts who will be happy to advise the right towbar for your vehicle.

# TOWBALLS

The most widely used link between the vehicle and trailer. They come in several different versions and are fixed to the towbar using high tensile bolts which must be tightened to the correct torque setting, which can be found on the manufacturers fitting instructions.

Extended towballs are designed for use with trailer couplings with integrated stabilisers.

10.0007	50mm Straight Shank Towball	25mm	190mm	2000kg
10.0009	50mm Straight Shank Towball	32mm	190mm	3000kg

## PARTSCHAT

"Straight shank towballs are used where a single vertical hole is used on the towbar. This type of attachment is commonly found on garden tractors, ATV's, forklifts, dumpers and American vehicles."

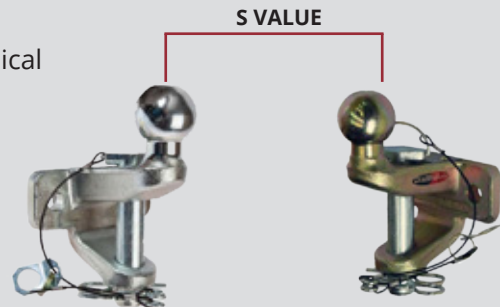

*2" towballs used in America are not legal in this country and must be replaced with a 50mm version.*

# S&D VALUES EXPLAINED

## THE S VALUE / NOSE LOAD

- The S value or Static Vertical Mass is the correct technical term for 'nose load'.
- It refers to the load, weight or mass applied by the coupling head of the trailer / caravan onto the towball / towbar fitted to the towing vehicle.
- It needs to be correctly determined before you purchase a towing product to ensure that the towing outfit (e.g. the vehicle and the trailer) is safe and complies with legal restrictions.

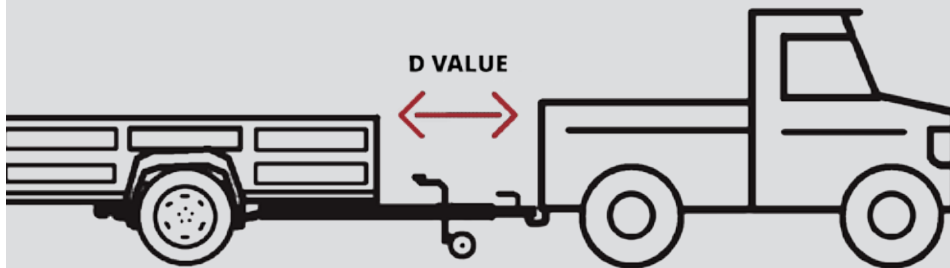

## MEASURING THE 'S' VALUE

- Measured by recording the force or weight applied by the trailer / caravan using a set of scales or proprietary device.
- Must be measured as close to the centre of the coupling head as possible and at the same coupling height as when coupled to the intended tow vehicle.

## THE D VALUE

- The 'D' value is a rating in kN that reflects dynamic loading limits between a towing vehicle and a trailer, i.e. the horizontal force between the towing vehicle and trailer.
- It is essential that you have the correct 'D' value when purchasing a towing product so that

your entire towing system retains its Type Approval status. ['D' values for all of our products are stated in our brochure].

## CALCULATING THE 'D' VALUE

You need the Max Gross Vehicle Weight (GVW) & the Max Gross Trailer Weight (GTW)

The 'D' value is then calculated as follows:

$$\frac{(GVW + GTW)}{(GVW + GTW)} \times \left( \frac{9.81}{1000} \right)$$

# UNIVERSAL COUPLINGS

Universal couplings are mostly used commercially where the application requires the ability to tow using a 50mm ball or eye, also known as a ring. The weight capacity stated on a 5 tonne universal coupling relates to the pin only – the towball is still rated at 3.5 tonnes.

One of the most important parts of your trailer is the coupling. The coupling you need is dependent on how your trailer has been constructed and its gross weight.

For a braked trailer, you must have a type approved coupling which are available in A-frame and straight drawbar variations. Unbraked couplings (trailers less than 750kg gross weight) usually require straight drawbar applications. They are manufactured from cast material or pressed steel and suit various box section sizes. We stock a wide range of coupling parts for many different types of trailers and towed equipment. Brands we stock include Alko, Knott-Avonride, Bradley, Indespension, BPW and Meredith and Eyre.

# ALKO A-FRAME COUPLINGS SPARES

## Information

Listed are some of the most popular couplings along with the various spares available. Care does need to be taken before ordering to check ETI No marked with a spanner symbol (⚙️) which is six digits long, and starts 811... For T-Pole Chassis fitted to compressors, welders, generators and light towers, the serial number on the axle plate is also useful. Call our TechTalk team if you need any help.

**Please note:**  
All Alko  
drawtube bushes

# ALKO UNBRAKED T-POLE CHASSIS COUPLINGS (STRAIGHT & SWAN NECK)

For Alko Unbraked Couplings, we require model, weight capacity, ETI No. (811...) and axle serial no. in order to supply the correct parts

## Information

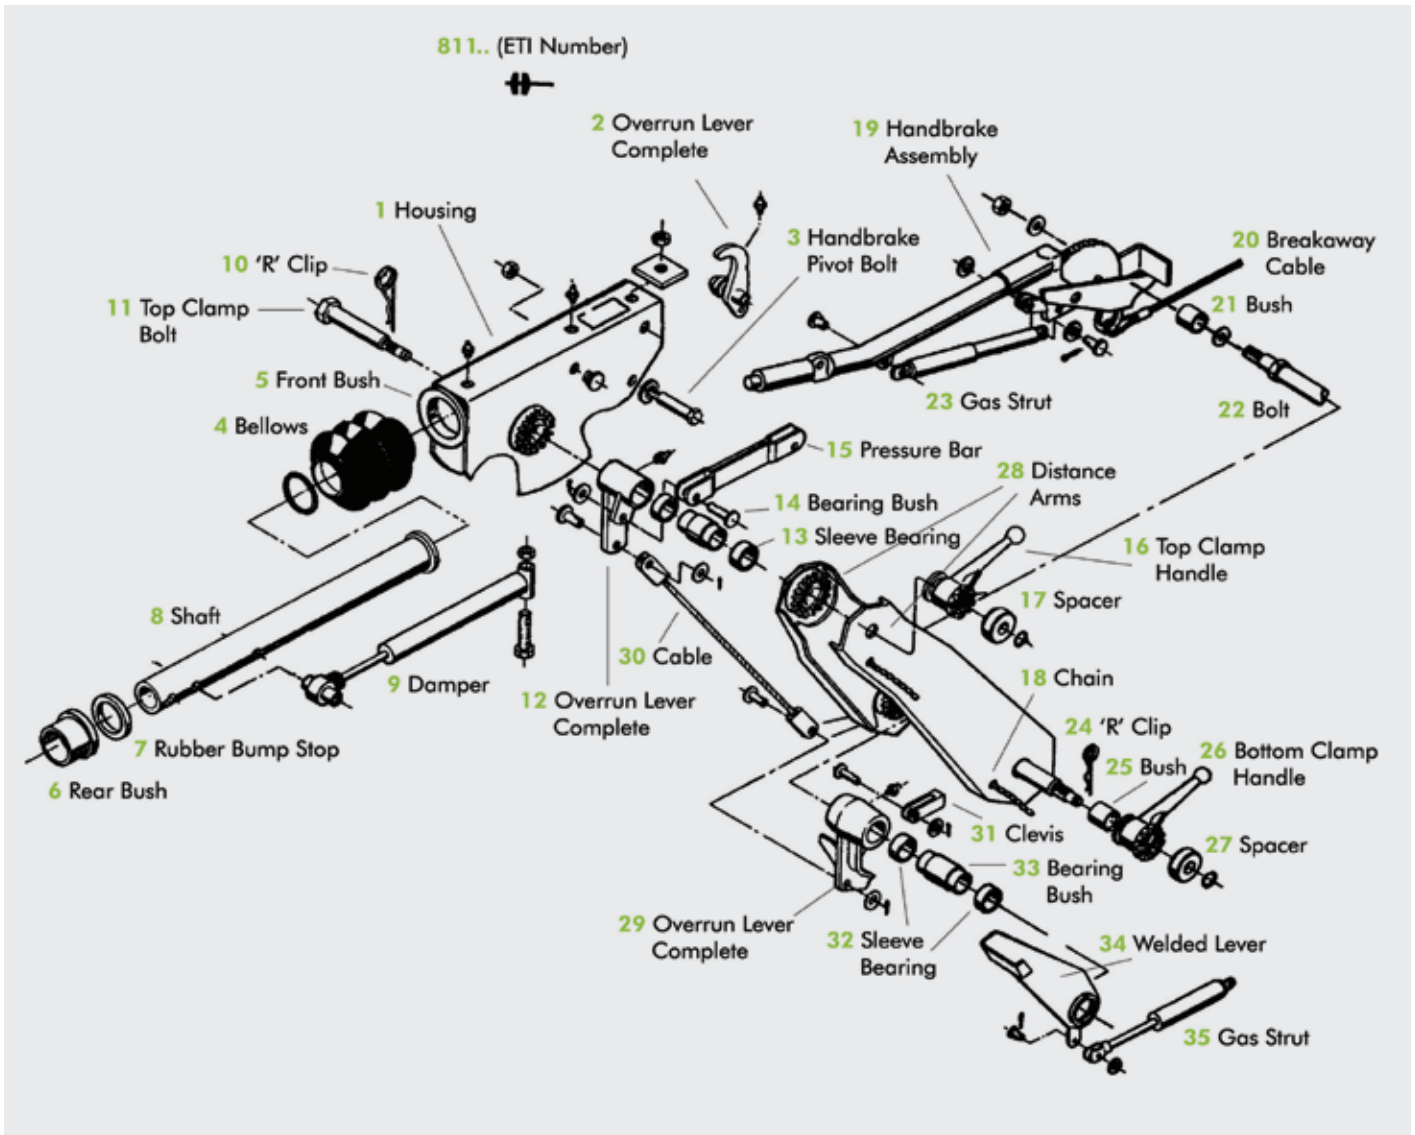

Swan Neck type Braked T-Pole chassis couplings have Bowden cables that run from the handbrake lever to the compensator - and so need to be measured (black outer sheath length) so we can supply the correct length.

## KNOTT-AVONRIDE ADJUSTABLE HEIGHT COUPLING SPARES

### Information

For Knott adjustable height couplings, we require model and weight capacity so that we can supply the correct parts

# INDESPENSION CAST A-FRAME COUPLINGS

## Information

Old type couplings take a 42mm Jockey Wheel with the bracket located in the middle of the coupling. New style couplings take a 48mm jockey wheel with the bracket located at the back of the coupling.

# JOCKEY WHEELS AND PROPSTANDS

The components in this chapter support both ends of your trailer to keep it level whilst it is unhitched from the towing vehicle – and whilst you are loading it. Jockey wheels also aid easy manoeuvring when unhitched. If you use an adjustable version of either a jockey wheel or prop stand, it saves undue strain on your back and makes hitching up and unhitching an easy exercise.

## BRAKE CABLES

### BRAKE CABLES

The essential connection between the rod and brake shoes, which finally completes the linkage system. There are various end fittings available, which are shown below. To supply the correct cables we need to know which fittings you have and the length of the black outer sheath (H) and the overall length of the inner cable (S).

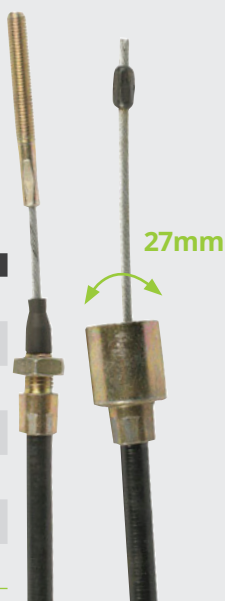

### INFORMATION

Specialist cables can be made up! We'll make anything from throttle cables, bonnet release cables, brakes of course and more.

## BOWDEN CABLES

# BOWDEN CABLES

The range of cables listed is very small compared to the sizes available. In order to supply the correct one we require the make and model of the coupling along with the diameter of the inner cable and the dimensions (I) and (O) shown.

### INFORMATION

Bowden cables consist of a flexible or rigid inner core, a teflon slide pipe, wire sheathing and plastic sheathing to protect against rust and dirt. They are individually provided with impact buffers and adapted end pieces.

## INFORMATION

When trying to identify wheel studs, it is critical that you check thread size, the diameter of the splined shoulder and length.

Wheel bolts screw into tapped holes in the brake drum. Wheel studs have a splined shoulder which is held in by friction through the drum casting.

# WHEEL SECURITY

Wheel Sentry® is an easy-to-fit loose wheel nut indicator, wheel nut cover and wheel nut retainer in one. It alerts you to loosened wheel nuts to prevent wheel detachment, protecting you against wheel loss. It is available in a wide range of sizes to fit HGV's, LGV's and Trailers. Wheel Sentry® wheel nut indicators are easily push-fit over the wheel nuts of your HGV, LGV or Trailer. Once positioned, they link together with a tough Viton band. This allows wheel nuts to loosen slightly, then holds them in place for complete peace of mind.

## Rubber Suspension Axles

The most reliable and up-to-date form of suspension for trailers. Consisting of a full width beam, they add rigidity to the chassis of the trailer, but have the performance of independent suspension. The construction of the axles consists of strands of rubber placed in the end of a length of box, whilst the suspension arm is pressed in between. Once weight is applied, the rotation of the drop arm compressing the rubber gives you your suspension.

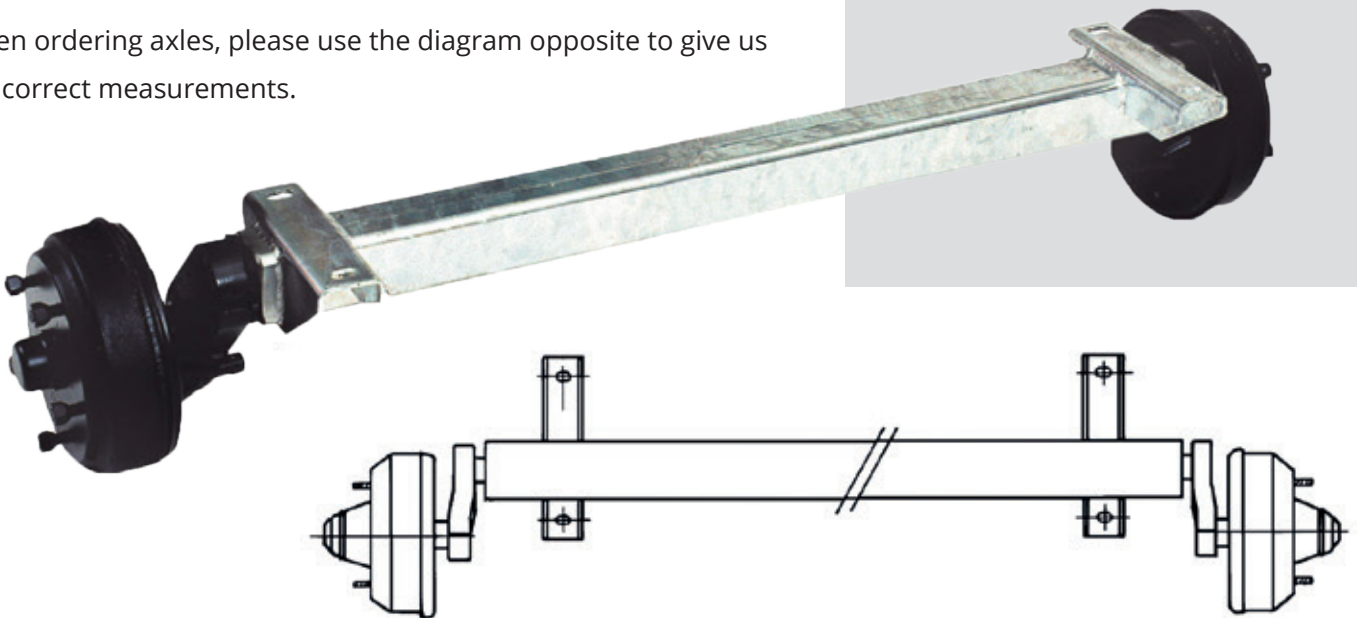

Most axles are made to order. They are available braked or unbraked, and can be studded to suit various different wheels. Weight capacities range from 500kg - 3000kg.

When ordering axles, please use the diagram opposite to give us the correct measurements.

### INFORMATION

All trailers with a Gross Vehicle Weight (GVW) of over 750kg must have brakes. If the trailer has four wheels, each wheel must be braked.

If you are replacing an existing axle, always look for the manufacturer's serial plate which is riveted to the axle body.

### INFORMATION

We stock axles for various makes of trailer and machine including Ingersoll Rand, Compair, Holman, Indespension, Benford, and Timberwolf. Please call the sales office for more information.

## Solid Beam Axles

Although now not so common, solid beam axles are still available for use in conjunction with leaf springs. Constructed using a solid bar, the stubs are turned on the ends, allowing the brakes to be fitted.

Again, they are available braked or unbraked with a wide range of stud patterns to suit various wheels. Weight capacities range from 500kg to 3000kg. To manufacture these axles, we need the dimensions as shown in the diagram below.

## INFORMATION

If you are replacing an existing axle, why not look for the manufacturer's serial plate riveted to the axle.

## Suspension Units

Suspension units are a simple, yet extremely robust and highly effective means of trailer suspension. They are constructed in exactly the same way as an axle, using high density rubber inserts but are supplied in two parts to allow them to be totally universal and will suit vehicles of any width.

They are available from stock, allowing for immediate dispatch and can be supplied with or without stub axle or hub. They suit both braked and unbraked options and provide exceptional value for money

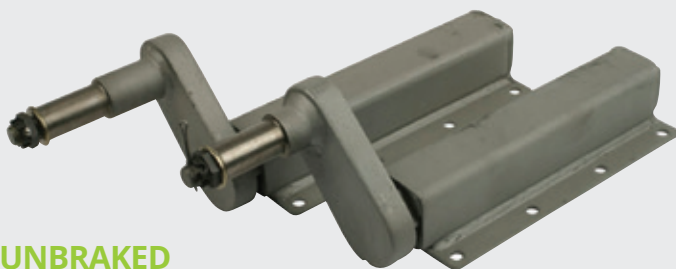

## INFORMATION

All suspension units are supplied in pairs. The weight rating listed relates to the capacity of a pair of suspension units, not their individual capacity.

## Leaf Springs

Leaf springs used with solid beam axles are a traditional form of suspension. They are ideal for use in harsh conditions, and if a spring does break or fracture they are easily replaced. They are all 2" wide and come in two different types: Double Eye and Slipper End.

## Double Eye Leaf Springs

Double eye leaf springs are a form of leaf spring where both ends are fixed, but the suspension travel comes in the form of a swinging link. They are available in a range of capacities and lengths for use with one or two axles and come complete with the shackle equipment necessary.

## Slipper End Springs

Slipper end springs are a form of leaf spring where one end is fixed and the other slides through an open bracket as the spring flexes under load. They are available with a range of capacities for single and twin axle use. Each set of springs is supplied with a kit of shackle equipment to fix the spring to the chassis and axle. The brackets which fix to the chassis can be high or low mounted depending on the height of the trailer bed required.

# TRAILER WHEELS, TYRES AND MUDGUARDS

Your trailer tyres are the only part that is in contact with the road surface. The level of comfort you experience whilst driving, stability, effectiveness of steering and braking are all dependent on the quality of your tyres – so it is essential that both your trailer wheels and tyres are properly maintained. We stock a huge range of wheel and tyre assemblies for any item of towed equipment in use today, along with mudguards, tubes, valves and accessories.

# REGULATION

## INSTALLATION OF LIGHTING & SIGNALLING

# 48

### REGULATION 48 REVISION

This is the regulation for installation of lighting and signalling. Revision 3 details that retro-reflective markings according to EC104 are now mandatory for any new EU type approvals for trucks 7.5T and over (03 and 04). This means that any vehicle of this type sold into countries automatically adopting 48-03 will need to have EC104 approved markings.

### EC104

European regulation for the retro-reflective markings of HGVs. Markings to comply with Regulation 48.

### DIRECTIVE 76/756/ECC

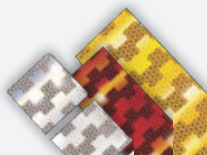

This directive makes EU type approvals mandatory and means that all EU countries must adopt 48-03.

### WE STOCK EC104 RIGID GRADE TAPE IN:

**RED:** SKU: 28.3001: 50mm x 50.0m  
SKU: 28.3002: 50mm x 12.5m

**AMBER:** SKU: 28.3003: 50mm x 50.0m

# RATCHET STRAPS

### Hardware

Our ratchet straps are manufactured with double sprockets on the ratchet to ensure smooth operation and ease of use. All metalwork is stamped with the breaking strain and the solid steel handles have a plastic grip for comfortable use in cold weather.

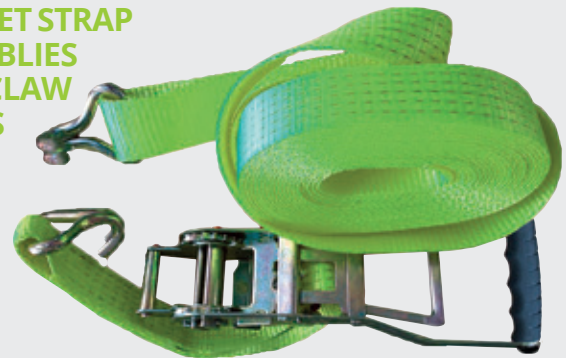

### Webbing

In unmistakable Proline green, our straps are great for use in the dark. During the weaving process, a weaving agent is added which resists moisture and prevents fraying.

### The Legal Stuff

All Proline straps conform to GS and TUV standards, complete with the tear-resistant blue label showing the date of manufacture, GS and TUV logos, capacity rating, size and unique serial number to ensure traceability. Webbing is fully compliant with EU legislation and EN Rating EN12195-2, with safe operating instructions sewn in.

# WHEELSENTRY

## AN INNOVATION In towing safety.

WheelSentry is a combined wheel-nut indicator and a retainer in one. Simply fitted to the wheel nuts of your trailer, they are linked together with a Viton band that allows wheel nuts to loosen slightly, but then holds them at a new lower torque level. The new position of the WheelSentry indicator is clearly visible when checked and ensures prompt attention to the loosened nut.

WheelSentry retains wheel nuts without causing fatigue and thread damage that conventional retainers can. Helping prevent expense of damage or accident, and giving prompt indication of any potential problems, WheelSentry is a low-cost insurance policy for trailers and towed equipment.

## HOW IT WORKS

1. Fit WheelSentry Indicators to your wheel nuts - a simple push fit by hand.

2. Apply Viton band to interlink all WheelSentry indicators.

3. After a journey check the indicators for any possible loosening.

4. Simply remove Viton band and indicator from loosened nut, tighten and re torque the nut then re-apply WheelSentry for your next journey.

# WORKSHOP CONSUMABLES AND EQUIPMENT

In order to protect and maintain your towing equipment, a range of quality lubricants and consumable products are required. At ATE, we stock maintenance sprays, safety consumables including gloves and spill kits, batteries and battery maintenance products, cutting, measuring and lifting products among others for your workshop.
